## State Based Health Insurance Exchange Individual Eligibility Business Requirements (BR) Template

Prepared by: Manatt Health Solutions

The Individual Eligibility Business Requirements template defines, at a high level, what has to be done by a state's eligibility information technology system to fulfill Exchange and Medicaid business needs for Qualified Health Plans (QHP) and insurance affordability program eligibility determinations, including Medicaid, CHIP, the Basic Health Program (should the state implement one), and premium tax credits. The business requirements were developed based on the eligibility business functions that state Exchanges and Medicaid agencies are required to support pursuant to the Patient Protection and Affordable Care Act (ACA), and implementing regulations.<sup>1</sup> Noted throughout the template are state policy decisions that will drive eligibility determination process and business requirements. These decisions include the state's reasonable compatibility standard and whether navigators, agents, brokers, and other third party assisters will have a designated portal access to the Exchange. While the template reflects federal requirements and state options, states may build on this model to include state specific eligibility requirements. This template may be useful to states in developing both Exchange requirements and modernized Medicaid eligibility system requirements.
