**Latinos' Lives and Health Today Summary** 

Part Two: Immigrants and Non-Immigrants

January 2014

### **Latino Immigrants' Lives and Health Today**

#### How were Latinos identified?

Respondents were first screened by asking if they were of Hispanic or Latino descent. If they were, they were then asked their and their family's heritage.

Respondents were also asked if they were born in the U.S., the U.S. territory of Puerto Rico, or another country. Those who were born in United States or Puerto Rico were considered "non-immigrants;" those born in another country were considered "immigrants." Respondents were *not* asked if they were U.S. citizens or not.

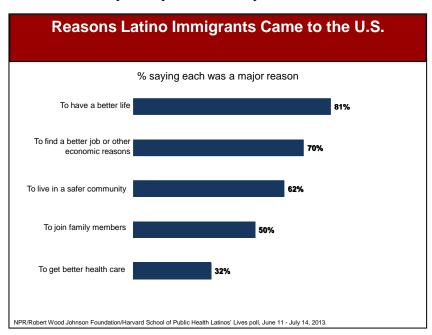

### Who are Latino immigrants?

More than half of the U.S. adult Latino population was not born in this country. The survey found just 45% of Latinos were born in the United States or the U.S. territory of Puerto Rico, while 54% were born in another country. Significantly more Latinos of South American (85%), Central American (81%), Dominican (80%), and Cuban (73%) ancestry reported being born in another country than Latinos of Mexican ancestry (54%). More than a third (34%) of Latinos report that they came to the U.S. as children. Similar numbers (36%) reported that they were 18-24 when they first came to the U.S. A significantly higher proportion of Mexican immigrants (40%) say they came to the U.S. as children under 18 than did immigrants of Dominican (23%), Cuban (22%), or Central American (21%) heritage.

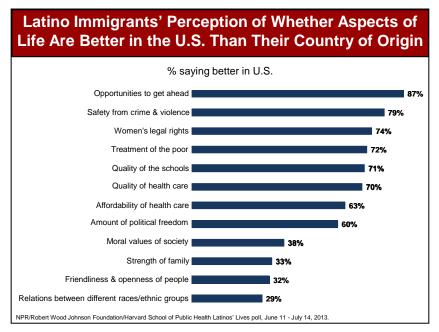

There is a clear pattern of acculturation for Latino immigrants in the United States in terms of language. While more than two-thirds (69%) of Latino immigrants speak only Spanish or more Spanish than English at home, only 18% of non-immigrant Latinos do.

### Immigrants came looking for a better life - and they mostly like what they've found

The survey asked Latino immigrants about the reasons they had come to this country and found that most report there was more than one major reason. A strong majority (81%) report a major reason was to have a better life. High numbers also say that finding a better job or other economic reasons (70%) and living in a safer community (62%) were major reasons. Half (50%) said joining family members was a major reason, while just under a third (32%) said getting better health care was a major reason.

Latino immigrants were asked to compare several aspects of life in the United States to their country of origin. Overall, Latino immigrants report that things are better in the United States on most measures. The areas considered better in the United States by the most immigrants are opportunities to get ahead (87%), safety from crime and violence (79%), and women's legal rights (74%). However, on four measures, fewer than four in ten immigrants report that things are better in the United States: moral values of society (38%), strength of the family (33%), friendliness and openness of the people (32%), and relations between races and ethnic groups (29%).

There are some important differences among Latino immigrant groups in their assessments of life in the U.S. compared to life in their home countries. Cuban immigrants (95%) are much more likely than immigrants of Mexican heritage (55%) to say that the amount of political freedom is better in the U.S. Mexican immigrants (82%) are more likely than Cuban immigrants (51%) to say that safety from crime and violence is better in the United States.

While most Latino immigrants see the quality (70%) and affordability (63%) of health

care as being better in the U.S. than in the country they came from, many report having health care problems. Among Latino immigrants who have received medical care in the past twelve months, about one in five (21%) rate the care or health services they received as fair or poor. In addition, significant numbers of Latino immigrants report that over the past twelve months they or a family member had a serious problem with having enough money to pay for health insurance (31%), to pay doctor and hospital bills (27%), or to pay for prescription medicines (26%), and with getting needed health care (18%).

Of note, Latino immigrants generally do not perceive their diets as less healthy in the U.S. About four in ten (38%) of immigrants see their diet as healthier in the United States, and about the same number (39%) see their diet as about as healthy. Only one in five (21%) see their diet as less healthy. Prior studies have shown that obesity rates among immigrants increase as their duration of residence in the U.S. increases. They suggest that this may be attributable in part to changes in lifestyle, including unhealthy diet. Cuban immigrants are significantly more likely to see their diet as more healthy in the U.S. (60%) than are immigrants of Dominican (37%), Mexican (36%), or South American (21%) heritage.

## Hope for the future, but economic uncertainty right now

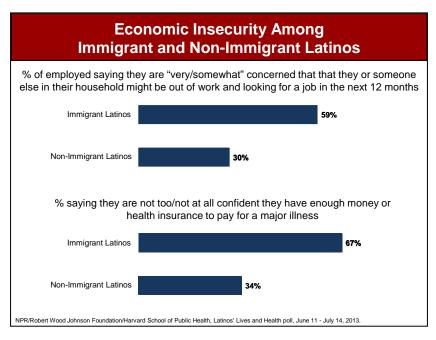

As was true for generations of earlier immigrants who came to the U.S. in search of a better life, Latino immigrants have high expectations for their children's futures. Immigrant parents are more likely than non-immigrant parents to say their children would have better employment opportunities than they have

3

<sup>\*</sup> MS Goel, EP McCarthy, RS Phillips, CC Wee, "Obesity among US Immigrant Subgroups by Duration of Residence," *JAMA : The Journal of the American Medical Association* 2004;292(23):2860-7.

had (91% vs. 68%) and better educational opportunities than they have had (92% vs 55%). Immigrant parents are also more likely to say they expect their children will be better off than them financially (84% vs. 73%) In addition, more Latino immigrants rate schools in their communities as excellent or good than do non-immigrants (71% vs. 57%).

Though very positive about their lives in general, immigrants do report higher levels of economic insecurity. About four in ten (42%) say their finances are not so good or poor, compared to fewer than three in ten (28%) of non-immigrant Latinos. Nearly six in ten (59%) employed immigrants are concerned that they or someone else in their household might be out of work and looking for a job in the next twelve months, nearly twice as many as non-immigrant Latinos (30%) who are concerned. Twothirds of immigrant Latinos (67%) report that they are not too/not at all confident that they have enough money or health

insurance to pay for a major illness, compared to one-third (34%) of non-immigrant Latinos. Immigrants are also more likely to report having been without health insurance for some time in the past twelve months (65%) than are non-immigrants (51%).

### Methodology

This poll is part of an on-going series of surveys developed by researchers at the Harvard Opinion Research Program (HORP) at the Harvard School of Public Health in partnership with the Robert Wood Johnson Foundation and NPR. The research team consists of the following members at each institution.

Harvard School of Public Health: Robert J. Blendon, Professor of Health Policy and Political Analysis and Executive Director of HORP; John M. Benson, Research Scientist and Managing Director of HORP; Kathleen J. Weldon, Research and Administrative Manager.

Robert Wood Johnson Foundation: Fred Mann, Associate Vice President, Communications; Carolyn Miller, Senior Program Officer, Research and Evaluation; and Ari Kramer, Communications Officer.

NPR: Anne Gudenkauf, Senior Supervising Editor, Science Desk; Joe Neel, Deputy Senior Supervising Editor, Science Desk; Steve Drummond, Senior Supervising Editor, National Desk; Vickie Walton-James, Deputy Senior Supervising Editor, National Desk; Luis Clemens, Senior Editor, Code Switch; Matt Thompson, Editorial Product Manager.

In addition, Debra Joy Perez, who was at the time Assistant Vice President, Research and Evaluation, at the Robert Wood Johnson Foundation, was part of the research team.

Interviews were conducted via telephone (including both landline and cell phone) by SSRS of Media (PA), June 11 – July 14, 2013, among a nationally representative sample of 1478 Latinos age 18 and older. The interviews were conducted in English and Spanish. The margin of error for total respondents is +/- 3.7 percentage points at the 95% confidence level. Respondents were first screened by asking if they were of Hispanic or Latino descent. If they were, they were then asked their and their family's heritage. Oversamples were conducted with Latino groups of Puerto Rican, Cuban, and Dominican heritage in order to make analysis by those groups possible. The groups by heritage were weighted to their actual proportion of Latino adults nationwide. Respondents were also asked if they were born in the U.S., the Commonwealth of Puerto Rico, or another country. Those who were born in United States or Puerto Rico were considered "non-immigrants;" those born in another country were considered "immigrants."

	Number of interviews	Margin of error (percentage points)
Total Latinos	1478	±3.7
Immigrants	865	±5.0
Non-immigrants	612	±5.7

Possible sources of non-sampling error include non-response bias, as well as question wording and ordering effects. Non-response in telephone surveys produces some known biases in survey-derived estimates because participation tends to vary for different subgroups of the population. To compensate for these known biases and for variations in probability of selection within and across households, sample data are weighted by household size, cell phone/landline use and demographics (sex, age, education, marital status and census region) to reflect the true population. Other techniques, including random-digit dialing, replicate subsamples, and systematic respondent selection within households, are used to ensure that the sample is representative.

NPR is an award-winning, multimedia news organization and an influential force in American life. In collaboration with more than 900 independent public radio stations nationwide, NPR strives to create a more informed public – one challenged and invigorated by a deeper understanding and appreciation of events, ideas and cultures. NPR reaches a growing audience of 27 million listeners weekly; to find local stations and broadcast times for NPR programs, visit <a href="https://www.npr.org/stations">www.npr.org/stations</a>

For more than 40 years the Robert Wood Johnson Foundation has worked to improve the health and health care of all Americans. We are striving to build a national culture of health that will enable all Americans to live longer, healthier lives now and for generations to come. # NPR/Robert Wood Johnson Foundation/Harvard School of Public Health LATINO IMMIGRANTS' LIVES AND HEALTH TODAY

## **ENGLISH**

This survey was conducted for National Public Radio, the Robert Wood Johnson Foundation, and the Harvard School of Public Health via telephone by SSRS, an independent research company. Interviews were conducted from June 11 – July 14, 2013, among a nationally representative sample of 1,478 Latino respondents age 18 and older.

Non-immigrant = born in the U.S. or Puerto Rico. Immigrant = born in another country.

	Number of interviews	Margin of error (percentage points)
Total Latinos	1478	±3.7
Immigrants	865	±5.0
Non-immigrants	612	±5.7

<u>Significance Testing for Differences between Groups (indicated by letters next to the %s on the tables):</u> a = statistically higher proportion than non-immigrants, p<0.05. b = statistically higher proportion than immigrants, p<0.05.

SS1a. In what language would you like to conduct the interview?

	English	Spanish
2013 – Total Latinos	48	52
Immigrant	17	83 <sup>b</sup>
Non-Immigrant	85ª	15

SS2. The terms Hispanic and Latino are both used to describe people who are of Hispanic or Latino origin or descent. Do you happen to prefer one of these terms more than the other?

	Hispanic	Latino	No preference	Don't know/refused
2013 – Total Latinos	33	15	52	*
Immigrant	32	16	51	1
Non-Immigrant	33	13	53	1

#### PERSONAL SATISFACTION

Now I'd like to ask you some questions about your life.

1. How satisfied or dissatisfied are you with your life overall these days? Are you...very satisfied, somewhat satisfied, somewhat dissatisfied, or very dissatisfied?

	SATISFIED				DISSATISFIED	Don't	
	NET	Very	Somewhat	NET	Somewhat	Very	know/refused
2013 – Total Latinos	90	60	30	8	6	2	2
Immigrant	91	62	29	8	6	2	1
Non-Immigrant	90	59	31	9	7	2	1

### **COMMUNITY**
